A New  
Securement Device  
for Drains

1329-036 Rev C

# SecurAcath® provides improved drainage catheter securement

Reliable securement of drainage catheters is a serious clinical problem. Sutures and adhesives have been used for years with moderate success. Catheter migration and dislodgement are frequent complications of drainage catheters.

## How does the SecurAcath work?

- Small, blunt, nitinol securement feet are placed just beneath skin right at the catheter insertion site
- Cover is snapped onto base to affix to catheter shaft
- No sutures or additional skin punctures are needed
- No adhesives needed for securement
- Remains in place for life of catheter

## Benefits on Drainage Catheters

### Decreased Catheter Dislodgments and Replacement Costs

- Lower cost of patient care
- Minimize therapy interruption

### Increased Stability

- SecurAcath secures right at the catheter/skin junction
- Minimizes catheter movement, pistoning and migration

### Eliminates Suture Needle Sticks

- No sharps related injuries

### Improved Efficiency

- SecurAcath is much faster to use than sutures

### 360 Degree Site Cleaning While Secured

- Excellent cleaning access around the entire insertion site
- Catheter remains stable and secure during cleaning

### Decreased Skin Irritation

- Sutures can become infected, cause skin irritation and breakdown
- Minimize use of skin-damaging adhesives

SecurAcath® – For the Life of the Line
